

The Ultimate in Core Storage

# Discoverer Series 2 User Guide

Stack your Discoverer® core trays across the timber slat of the pallet, three (3) wide for maximum stability.

Use Locking Links every third layer for added security and safety when moving or transporting the trays.

For maximum security when loading onto a forklift, pick up the pallet so that the ID tags are facing away from the driver and ensure the forklift tines are tilted upwards.

We do not recommend a maximum height when filled with core, as this is dependent upon the weight of the core. Please use common sense and caution when stacking.
